BIO MIST

SANITIZER AND FOGGER

MATERIAL & FUNCTION

BIO MIST is aqueous mixture of amphoteric amines (dodecyl diethylenediamino glycine and dodecylaminopropyl glycine hydrochlorides). It has a wide spectrum of microbiocidal activity against both gram positive and gram negative bacteria, fungi and some viruses.

APPLICATIONS

BIO MIST removes unpleasant odours by destruction of odour producing organisms and by chemical combination with odourous chemicals. BIO MIST remains active in the presence of dirt and proteinaceous material. BIO MIST has a detergent effect by removing dirt. BIO MIST is, unlike chlorine and alkaline disinfectants, not corrosive to wood and metal surfaces.

DIRECTION FOR USE

As a Fogger:

For best results, pre-wet the surfaces with a 1% solution of BIO MIST and then fog with a 2 % solution until the atmosphere reaches dew point.

Disinfecting equipment, walls, floors and work surfaces:

Remove residual food and grime with detergent. Apply a 2 % solution with a mop, clean sponge or cloth. Leave in contact for at least 20 minutes. Rinse the surface with potable water.

CAUTION

Avoid contact with skin and eyes and avoid breathing vapour or spray mist.

PACKAGING

15 Litre container

IMPORTANT NOTICE TO CUSTOMER

*Since the use of this product is beyond the control of either seller or manufacturer, their only obligation shall be to replace any quantity of product which is proven defective. They cannot assume any risk or liability in excess of the purchase price of the product itself, which does not include labour or any consequential damages resulting from the use of this product. Determining the suitability of this product for any intended use shall be solely the responsibility of the user. **ALWAYS TEST FIRST.***
