BOOT WASH

(Suitable for use in food and meat export establishments.)

MATERIAL & FUNCTION

BOOT WASH is a specialized Quaternary Ammonium Compound (QAT) detergent for cleaning and sanitizing boots via a bath application. A blue food grade dye is present as a guide to the potency of the product. When the colour diminishes, so does the concentration of the product. The container can be topped up to maintain the level of colour, however it should be dumped and rinsed out at least once per shift to remove the build up of soil deposits.

BOOT WASH can be used in food preparation areas to reduce environmental contaminants by preventing soil build up caused through dirty footwear.

It is particularly suited where cross contamination from other work areas is considered to be a high risk. Footwear should also be scrubbed to remove any residual soil attached to footwear, paying particular attention to sole and tread areas.

APPEARANCE

Dark blue liquid.

APPLICATION

Fill the boot bath with water and add BOOT WASH at a rate of 1 Litre BOOT WASH per 300 Litres of water. Replace the solution at least once per shift.

PACKAGING

15 & 20 Litre containers.

IMPORTANT NOTICE TO CUSTOMER

*Since the use of this product is beyond the control of either seller or manufacturer, their only obligation shall be to replace any quantity of product which is proven defective. They cannot assume any risk or liability in excess of the purchase price of the product itself, which does not include labour or any consequential damages resulting from the use of this product. Determining the suitability of this product for any intended use shall be solely the responsibility of the user. **ALWAYS TEST FIRST.***
