## SUPA SOKE

### SOIL WETTING AGENT

#### WHY DO I NEED SUPA SOKE?

All garden soils contain organic matter which when dry, actually repel water and is extremely difficult to re-wet. The evaporation of moisture during warm or hot weather can cause water repellency which can have a disastrous effect on pot plants and hanging baskets. On lawns and grassed areas the problem manifests itself as a dry patch or brown patch. These are areas of grass which, for no apparent reason have turned brown while surrounding areas remain lush and green.

**SUITABLE FOR USE ON:** Lawns, Golf Courses, Tennis Courts, Flower Beds, Parks, Ornamental Pots and Baskets.

#### WHAT IS SUPA SOKE?

SUPA SOKE is a highly effective wetting agent which when applied dramatically increases your soil's ability to absorb and retain moisture therefore promoting and enhancing existing plant life.

#### WHAT ARE THE BENEFITS OF USING SUPA SOKE?

SUPA SOKE will

- Reduce surface tension, allowing moisture to penetrate already dried out organic matter, allowing deep and complete soaking of treated areas.
- Through effective wetting, maximize the distribution of soluble fertilizers throughout treated areas.
- Retain water for longer periods of time
- Reduce evaporation and run-off - thereby reducing the necessity to apply water as frequently.

- Allow for significant cost savings in water.
- Allows for even water dispersion and permit natural drainage.
- Not cause root rot and is non toxic to plant life.
- Remain active in your soil for up to 12 months.
- Be economical as 1 litre will treat 200 square metres of your garden.

#### **INSTRUCTIONS FOR USE**

**Lawns and grass areas:** Dilute 15millilitres SUPA SOKE in 10 litres of water - this will now treat 3 sq. metres (5mls per square metre). Irrigate thoroughly immediately after application as product left on leaf structure may cause burning during hot weather.

**Golf courses, bowling greens etc:** Dilute 1 litre SUPA SOKE in 670 litres water and apply to 200 sq metres of turf, fairways, greens or tees. Bowling greens require approx 7 litres per green.

**Flower beds and vegetable gardens:** Dilute 15mls SUPA SOKE with 10 litres water - this solution will now treat 3 sq. metres of garden (5mls per square metre). If the area has already been planted SUPA SOKE can still be applied, however, ensure the area is thoroughly irrigated immediately after application as any product remaining on leaf structure may cause burning during hot weather.

**Hanging baskets and plant pots:** Using same dilution rate, i.e.15 mls to 10 litres of water, give pots and baskets a thorough soaking again ensuring all solution is thoroughly washed from leaf structure. It is recommended that SUPA SOKE be applied twice annually to pots and baskets during summer months.

**SUPA SOKE SOIL WETTING AGENT THAT LASTS UP TO 12 MONTHS**

**NOTE:** For optimum results use Supa Soke before the heat of the day. If used on hot days some burning of foliage may occur. To prevent burning thoroughly wash SUPA SOKE into the ground.

## **PACKAGING**

1 litre, 2 litre, 5 litre, 20 litre & 200 litre containers

## **IMPORTANT NOTICE TO CUSTOMER**

*Since the use of this product is beyond the control of either seller or manufacturer, their only obligation shall be to replace any quantity of product which is proven defective. They cannot assume any risk or liability in excess of the purchase price of the product itself, which does not include labour or any consequential damages resulting from the use of this product. Determining the suitability of this product for any intended use shall be solely the responsibility of the user. **ALWAYS TEST FIRST.***
