SUPA SOKE GRANULES

SOIL WETTING AGENT

Domestic Grade

WHY DO I NEED SUPA SOKE?

All garden soils contain organic matter which, when dry, actually repel water and is extremely difficult to re-wet. The evaporation of moisture during warm or hot weather can cause water repellency, which can have a disastrous effect on pot plants and hanging baskets. On lawns and grassed areas the problem manifests itself as a dry patch or brown patch. These are areas of grass which, for no apparent reason have turned brown while surrounding areas remain lush and green.

SUITABLE FOR USE ON: Lawns, tennis courts, flowerbeds, ornamental pot plants and hanging baskets.

WHAT IS GRANULAR SUPA SOKE?

GRANULATED SUPA SOKE is a highly effective, easy to apply, premium grade wetting agent which when applied dramatically increases the ability of repellent soils to absorb and retain moisture. Eliminates dry patches and run-off and promotes and enhances existing plant life.

WHAT ARE THE BENEFITS OF USING SUPA SOKE?

GRANULATED SUPA SOKE will

- Reduce surface tension allowing moisture to penetrate already dried out organic matter, allowing deep and complete soaking of treated areas.
- Through effective wetting, maximize the distribution of fertilizers throughout treated areas.
- Retain water for longer periods of time
- Reduce evaporation and run-off - thereby reducing the necessity to apply water as frequently.
- Allow for significant cost savings in water.
- Allows for uniform water dispersion and permit natural drainage.
- Not cause root rot and is non toxic to plant life.
- Remain active in your soil for up to 12 months.

- Be economical, as 10 kilograms will treat 125 square metres.

INSTRUCTIONS FOR USE

Lawns and grass areas: Apply at the rate of 80 gms per square metre either with a fertilizer spreader or by hand broadcast. Water in immediately after application.

Flower beds and vegetable gardens: In new garden beds apply at the rate of 80 gms per square metre. If the area has already been planted SUPA SOKE can still be applied, however, ensure the area is thoroughly irrigated immediately after application as any product remaining on leaf structure may cause burning during hot weather.

Hanging baskets and plant pots: Apply at the rate of 60 gms per square metre then give pots and baskets a thorough soaking again ensuring all product is thoroughly washed into the soil and that there is no residual Supa Soke on the leaves of the plants. It is recommended that SUPA SOKE be applied twice annually to pots and baskets during summer months.

Potting Mixes: 4.8 kg per cubic metre

Seed mix: 2.4 kg per cubic metre

Special Note: A cupful is approximately 110 gms

SUPA SOKE SOIL WETTING AGENT LASTS UP TO 12 MONTHS

NOTE: For optimum results use GRANULATED SUPA SOKE before the heat of the day. If used on hot days some burning of foliage may occur. To prevent burning thoroughly wash SUPA SOKE granules into the ground.

PACKAGING

10 kg & 1 tonne containers

IMPORTANT NOTICE TO CUSTOMER

Since the use of this product is beyond the control of either seller or manufacturer, their only obligation shall be to replace any quantity of product, which is proven defective. They cannot assume any risk or liability in excess of the purchase price of the product itself, which does not include labour or any consequential damages resulting from the use of this product.
